ENURESIS [Bedwetting] and ENURESON

Enuresis, commonly called bed wetting in children, incontinence of urine in adults, is more common in boys than in girls. Enuresis has been considered incurable when it persists beyond puberty.

Incontinence of urine is more common in women than in men. Constant or very frequent micturition indicates some abnormality or disease.

Enuresis may be caused by paralysis, the secretion of a large amount of urine, as in diabetes, calculus (gravel), cystitis, irritation of the penis, worms, unduly profound sleep, dreams or gastric disturbance from late or unwholesome meals, but the most frequent cause is no doubt a defective innervation of the genito-urinary organs.

This theory has been proven by the uniformly good results obtained with Enuresol in young and old people, as the following typical cases of our records show:

Case No. 46. R. D., age 14, has always been a bed wetter, although apparently well otherwise. Her parents tried many treatments, medical and mechanical, without benefit. Five days after beginning Enuresol she stopped wetting the bed, but continued treatment four weeks longer and has had no return of the trouble since. Eight years ago N. C., eight years old, never missed wetting the bed every night. Took Enuresol and after the first week did not wet the bed any more.

The case of Mrs. W., age 44, is also worth mentioning. Has never had a full night's sleep, having to get up four to eight times a night. Visited Hot Springs, and left, disappointed, and was operated on twice, in two different hospitals, without benefit. Six weeks of Enuresol cured her completely, though she wetted the bed every night. Took Enuresol and after the first week did not wet the bed any more.

The case of F. J., seventy-five years old, is no less interesting. For over twenty-five years F. J. suffered with incontinence of urine day and night. As he grew older the trouble increased, lasting in past winter every half hour and stronger. Had a stroke of paralysis, which increased the trouble to such an extent that only a few drops of bloody urine could be voided, with intense pain causing suspicion to suspect cancer of the bladder. Being placed on Enuresol at the dose of two tablets every two hours with a glass of cool water or milk, the tenesmus disappeared in twelve hours and had a good restful sleep the next night and fully recovered perfect health in the next three months. Mr. F. J. is now 85 years old and at last report was still alive and well.

It is important to regulate the diet, and over-eating, coffee and sour food and drinks, pickles, vinegar, lemonade, should be avoided.

In many cases it happens that one box is enough to obtain a cure. This remedy is absolutely safe, harmless, being a tonic for the kidneys and nervous system, it is dependable for weak, nervous, restless, slow-growing, languid children.

A fair trial of Enuresol will convince anyone of its value.

CROWN POINT NEWS

Happenings Of A Day In Lake County's Lively Capital

The meeting of the Woman's Band, which was well attended, was quite the aggregation day. In the afternoon of the same day, the officers of the rotary club, Miss Marie Macomber and Mrs. W. B. Rader were elected delegates to the county convention which was held on April 21, 1920. Mrs. Macomber was elected president of the rotary club, Mrs. Rader and Mrs. Thompson were elected vice-president, and Mrs. Thompson, with the suggestion of the club, took the position of chairman of the women's auxiliary.

Mrs. Macomber's term as an auxiliary officer is to be a year, and the officers will be chosen at the annual meeting of the auxiliary.

Mr. and Mrs. Horace Macomber are returning back from California this evening.

Miss Mary Macomber was called into

DYER

to have a discussion on something of interest to the business when she came to Crown Point on Friday night. Mrs. Macomber, who was operating an ice cream parlor at the Hotel Marion Saturday night, was asked not to come back Sunday.

MUNSTER

PESKY BED BUGS

pests (Cimex lectularius). The method of the house holding is unknown, but it is believed that the insects are carried in from outside. These insects breed rapidly. For this reason, as far as possible, attempt to keep the house clean and the atmosphere comfortable. The "Mallardine" Plant in New York City, for instance, has a special room for the breeding of bed bugs, and the insects are destroyed by means of heat.

As a result of this, the pest is controlled.
